

Knowledge Plaza

Enterprise Knowledge Management and Search

Deploy a manageable and secure enterprise knowledge management platform

Fully manageable from a security and data visibility point of view, Knowledge Plaza enables social computing for all parts of your organization while addressing existing data visibility policies. And by combining corporate taxonomy with user generated folksonomy, you're able to build a powerful knowledge repository from the bottom up.

The screenshot displays a search results page in Knowledge Plaza. At the top, it shows 'You are looking for all tiles (56 results) in the workspace All workspaces tagged with Industry-web search'. Below this, there are tabs for 'All tiles', 'Documents', 'Web', 'People', and 'Mosaics'. The main content area lists several search results, each with a title, a brief description, and metadata such as '0 comments', '1 bookmarks', and 'First posted X weeks ago by Thomas Moreau'. The results include 'Google's Deep-Web Crawl', 'Update on Google and the deep web', 'Browsys Powersearch - Combined search tool', and 'A Federated Search Primer - Part II of III'. On the right side, there are sections for 'Tags' (Function, Industry, Organization, Project, Other tags) and 'Members' (a list of names with star ratings).

Knowledge Management + Internal and External Search

Enable communication and collaboration across teams and functions

By combining workspaces with user defined networks, users are able to quickly initiate collaborations and discussions without the overheads normally associated with cross team working. Collaborations and networks can be explicitly defined or allowed to emerge.

Identify subject matter experts inside and external to your organization

By identifying the expertise of colleagues based upon their real life data and interactions, you're able to identify subject matter experts across the organization. Every search, tag, keyword or facet can be used to find internal and external contacts matching the criteria.

Collate and mobilize knowledge

Workspaces facilitate high level repositories of knowledge whilst Mosaics provide user level features for the collation and annotation of information around a central topic. Full exports (pdf, files, vcards, websites) allow data to be mobilized for brokerage or distribution outside the system.

Maximize your existing search platforms

Centrally managed repository of your sanctioned search tools and destinations guarantees use by all members. Categorizing and mixing both internal and external search locations ensures your staff have access to relevant sources quickly and safely.

Leverage your investment in SharePoint and other platforms

Added value integration with enterprise tools such as SharePoint bring advanced social and search features to your existing platforms. By integrating with Knowledge Plaza you reduce silos and gain productivity enhancements.

Enterprise Information Sharing and Social Search

Available as an appliance or hosted, Knowledge Plaza's licensing model is flexible and can be tailored to your needs. Find out more or book a demo:
